

Meeting assets for CPFR / VC / CPH Alignment are ready!

Meeting summary

Quick recap

The team discussed vendor experience improvements and CPFR integration requirements, with a focus on understanding technical considerations and configuring work to support existing VC efforts. They reviewed project timelines and dependencies for implementing VC and CPFR systems, with various teams assigned to handle different technical aspects and integration requirements. The conversation ended with discussions about Tableau Cloud integration and project coordination, establishing regular check-ins and next steps for moving forward with the implementation.

Next steps

- [Nathan/Nathan Nelson: Produce and maintain a detailed list of all individuals, their ownership, and line-by-line actions with timelines for the project; share with relevant stakeholders.](#)
- [Nathan: Set up a detailed conversation between Stefan/Chris and CPH tech \(Santosh\) and Merch Analytics \(Andy Sims\) to align on Tableau/Snowflake integration requirements and expectations.](#)
- [Nathan/Nathan Nelson: Set up recurring meetings for wireframe and workflow reviews with relevant stakeholders \(including Tamara's design CDS team and product/UX owners\).](#)
- [Harish: Follow up with Justin Bowman, Santosh, and Amanda Greenslit to provide them visibility on the BRD and upcoming meetings.](#)
- [Nathaniel: Send out the BRD document \(including wireframes\) to Harish, Jeremy, and Tamara by Wednesday night for review prior to Thursday's meeting.](#)
- [Nathan/Nathan Nelson: Set up weekly recurring project check-ins until a detailed project plan with owners, actions, and timelines is established and tracking is in place.](#)
- [Nathan/Nathan Nelson: Ensure vendor experience team is looped in and documented as stakeholders for future project updates and training/documentation coordination.](#)
- [Nathan: Send background materials \(entitlement, BRD, user stories, etc.\) to Jeremy to help with onboarding/context.](#)
- [Harish: Provide approval on product and design feasibility after reviewing the BRD, and coordinate with product/tech/PM/vendor experience teams as needed.](#)
- [Nathan/Nathan Nelson: Schedule and conduct a health check meeting with the small group \(Harish, Jeremy, relevant tech/product/UX leads\) approximately halfway between major project milestones to surface issues and maintain alignment.](#)
- [Nathaniel: Provide weekly updates after the first major meeting, summarizing who is doing what, commitments, and outstanding actions.](#)

Summary

CPFR Integration and Vendor Experience

Nathan led a meeting to discuss vendor experience improvements and CPFR integration, sharing a document for review. He emphasized the importance of understanding CPFR considerations and configuring work to support

38 integration with existing VC efforts. The team was given time to review the document, with Nathan planning to
39 cover key integration considerations with Eric and Nathan.

40 **CPH and CPFR Integration Planning**

41 The team discussed the integration of CPH with CPFR reporting, with Harish explaining that the CPH tech team
42 needs to review use cases and create a module for reporting and email schedules. They identified the need for a
43 single-threaded contact, with Jeremy and Harish helping to understand integration within broader CPH efforts.
44 Nathan shared a tentative timeline for the project and asked for feedback on its accuracy, while Eric requested a
45 visual representation of responsibilities and timelines.

46 **VC and CPFR Implementation Timeline**

47 The team discussed the timeline and dependencies for implementing VC and CPFR systems, with Nathan
48 explaining that CPFR work would be staged to follow VC progress once the data platform built by supply chain
49 BIE is ready. Harish clarified that CPH would serve as a consultative role, with Santosh and Justin Bowman
50 handling technical aspects, while Eric emphasized the need for a detailed list of owners and actions for each
51 work stream. The discussion concluded with Harish and Stefan addressing integration requirements, with Stefan
52 seeking clarity on how to connect their Snowflake-based reporting to the CPH system, and Harish highlighting
53 the need for future technical discussions between CPH, replenishment tech, and SCBIE teams.

54 **Tableau Integration and Workflow Planning**

55 The team discussed integrating Tableau Cloud with CPH for invoice and payment details, with Harish explaining
56 that Santosh would be the point of contact for integration details. Stefan and Chris will work on connecting with
57 the Merch Analytics team to understand Tableau expectations, as their current plan only extends to Snowflake.
58 Nathan and Nathaniel are setting up recurring meetings to develop wireframes and workflows, with Tamara's
59 design team potentially being assigned to handle the UI design, though this is still pending Richard Neely's
60 decision.

61 **Project Coordination and Progress Tracking**

62 The team discussed project coordination and next steps, establishing that after the initial BRD presentation, they
63 will have weekly check-ins led by Nathan and Nelson to track progress and outstanding actions. Harish and
64 Tamara's teams will review the BRD and assess UX design requirements, which are expected to take 2-3 weeks
65 for the initial version. The team agreed to include vendor experience team involvement and to create a
66 consolidated list of actions, timelines, and dependencies, with Eric recommending weekly updates until a detailed
67 project plan is established.

68 **Document Review and Feedback Process**

69 Nathaniel will send a substantial document for review on Wednesday, asking Harish, Jeremy, and Tamara to
70 read it beforehand. Harish will also share the document with Justin Bowman, Santosh, and Amanda Greenslit for
71 their input on the tech and product sides. The team discussed running parallel efforts with VC and agreed to
72 raise flags if anything becomes too fragmented. Harish will provide approval from a product and design
73 perspective, including technical feasibility and vendor experience considerations.
