

1 CPH Portal & Platform: User Stories (CPFR & Vendor Compliance)

2 Document Type: Problem Definition & User Needs (Merged)

3 Last Updated: 2026-02-04

4 Status: Draft for Review

5 Document Purpose

6 This document captures problem statements and user needs for CPFR (Collaborative Planning, Forecasting &
7 Replenishment) and Vendor Compliance (VC) / Chargeback within the Chewy Partner Hub (CPH). It merges user stories
8 from the CPFR Platform & Portal User Stories and the Vendor Compliance User Stories to support a unified vendor
9 experience and coherent delivery. Problem statements and user needs are defined independently of specific technical
10 approaches. Requirements and solution details are documented in the CPH Portal & Platform BRD (CPFR & VC Merged).

11 Joint Business Product Owners: Nathan Miles (CPFR), Nathan Nelson (VC)

12 Table of Contents

13 Executive Summary

14 Combined User Stories (Dual Applicability — CPFR and Vendor Compliance)

15 CPFR-Only User Stories

16 Vendor Compliance–Only User Stories

17 Version / Phasing

18 Document Maintenance

19 1. Executive Summary

20 **Initiative Overview**

21 Chewy Partner Hub (CPH) will deliver a unified vendor experience that combines CPFR and Vendor Compliance
22 (chargeback/compliance) capabilities. Vendors and internal teams need a single, consistent location for reports and
23 data; shared administration for contacts and report distribution; and consistent navigation and access patterns across
24 CPFR and VC modules. Avoiding vendor experience fragmentation is a critical requirement.

25 **Combined (Dual Applicability)**

26 Stories in Section 2 apply to both CPFR and Vendor Compliance. They describe capabilities that live in CPH and serve
27 both programs—e.g., single location for reports, contact and report distribution, internal visibility to vendor reports, and
28 email modalities. CPFR and VC contact/recipient lists remain manageable as separate elements within the same
29 facility.

30 **CPFR-Only**

31 Stories in Section 3 reflect CPFR platform scale, data consistency, analytical depth, historical CPFR data, governance,
32 and CPFR-specific roles (ISM, CPFR team, BIE). There is no VC analogue for these needs.

33 **Vendor Compliance–Only**

34 Stories in Section 4 reflect chargeback/violation content, dispute resolution, Compliance Manager persona, program
35 scalability (\$21M entitlement), and VC-specific reporting/table outputs. There is no CPFR equivalent for these needs.

36 **Phasing**

37 Version 1 (Chargebacks), Version 2 (Violations), and Version 3 (CPFR) align to the merged BRD; VC Phase 3 and CPFR
38 Phase 2 are the same deliverable (CPFR module in CPH).

39 **2. Combined User Stories (Dual Applicability — CPFR and Vendor Compliance)**

40 The following user stories apply to both CPFR and Vendor Compliance. They support the merged BRD requirements for
41 Vendor Administration & Report Distribution, Communication & Email, Data Isolation & Security, and CPH Integration &
42 Vendor Experience Cohesion. CPFR and VC contact/recipient lists are manageable as separate elements (e.g., CPFR-only,
43 VC-only, or both per contact); the system uses and expands CPH's existing user self-service admin facility.

44 **2.1 Single Location for Reports / On-Demand Access (Vendor)**

45 **Story M-1:** As a vendor, I need a single, consistent location in CPH where I can access the reports and data that matter
46 to me (CPFR and/or chargeback/compliance) on-demand, 24/7, via my preferred method (portal, email, or both), so
47 that I can manage my business and address issues without sorting through dozens of emails or waiting for scheduled
48 reports.

49 Acceptance / Scope (dual applicability): - CPFR content may include forecast, inventory, fill rate, and related CPFR
50 metrics. - VC content may include chargeback/compliance reports and historical chargeback/compliance data and
51 documentation for self-service retrieval, issue analysis, dispute support, and trend tracking.

52 **2.2 Contact Information & Report Distribution — Vendor Self-Service**

53 **Story M-2:** As a vendor, I need to manage my contact information and report distribution preferences (for CPFR and/or
54 chargeback/compliance) in one place in CPH, so that the right people receive the right reports and I can make changes
55 without tickets or ISM intervention.

56 Acceptance / Scope (dual applicability): - CPFR and VC contact/recipient lists are manageable as separate elements
57 (same page or flow is acceptable; ability to assign contacts to CPFR only, VC only, or both as needed). - Uses and
58 expands CPH's existing user self-service admin facility (roles, permissions, reporting/email).

59 **2.3 Report Access Control & Distribution — Internal (Category Manager / In-Stock Manager)**

60 **Story M-3:** As a Category Manager / In-Stock Manager, I need one interface in CPH to assign or remove report access by
61 vendor and to manage which reports go to which stakeholders, with CPFR report tier/config and VC report config as
62 distinct, configurable elements, so that each partner receives only the information aligned to their strategy and we
63 avoid overwrites and confusion across systems.

64 Acceptance / Scope (dual applicability): - Certain configuration options are visible only to Chewy personnel (e.g., CPFR
65 tier per vendor, VC report types); vendor-visible options include contact emails, add/remove users, and who receives
66 CPFR/VC reports. - Uses and expands CPH's existing user self-service admin facility.

67 **2.4 Internal Visibility to Vendor Reports (Category Manager / In-Stock Manager)**

68 **Story M-4:** As a Category Manager / In-Stock Manager, I need access within CPH to the same reports and data that
69 vendors receive (for CPFR and/or chargeback/compliance), so that I can reference them, validate performance, and
70 engage effectively when vendors reference the data or request follow-up, without relying on manual file sharing or
71 conflicting sources.

72 **2.5 Email Modalities and Control — Vendor**

73 **Story M-5:** As a vendor, I need to choose how I receive reports (portal, email, or both) and control which reports are
74 emailed to which team members (for CPFR and/or chargeback/compliance), so that each of my teams (catalog,
75 production, replenishment, etc.) gets the right information and I can use automated systems that consume emailed
76 reports where needed.

77 2.6 Email Modalities — Manager Engagement and Proof of Delivery

78 **Story M-6:** As a Manager, I need vendors to remain engaged with performance reports and receive proactive
79 notifications, and I need proof of delivery where reports are emailed, so that I can hold them accountable for metrics
80 and ensure timely action.

81 Note: Applies to both CPFR and Vendor Compliance where the same CPH-driven email and contact management
82 system is used.

83 3. CPFR-Only User Stories

84 The following user stories are specific to the CPFR program. They reflect platform scale, data consistency, analytical
85 depth, historical CPFR data, governance, and CPFR-specific roles. There is no VC analogue.

86 CPFR Problem Context (abbreviated):

87 Scale constraint (current infrastructure cannot support 3,000+ vendors); data inconsistency and fragmented access;
88 manual coordination overhead consuming ISM and analyst capacity; limited vendor self-service for CPFR data. The CPFR
89 initiative addresses these through a governed data platform and a CPFR module in CPH.

90 3.1 Vendor User Stories (CPFR-Only)

91 **Story V-1:** View Consistent Data with ISM

92 As a vendor partner, I need to see the same data that my ISM sees when we discuss performance, so that we can have
93 productive conversations without spending time reconciling conflicting numbers

94 **Story V-2:** Access Appropriate Analytical Depth

95 As a vendor partner, I need to access data at the analytical depth that matches the planning and monitoring needs of
96 my business, so that I can make informed decisions at the right level of detail for my planning processes

97 **Story V-3:** Access Historical Data for Analysis

98 As a vendor partner, I need to access historical CPFR data (up to 2 years) with daily granularity, so that I can identify
99 trends, validate forecast accuracy over time, and make data-driven planning decisions

100 3.2 In-Stock Manager (ISM) User Stories (CPFR-Only)

101 **Story I-1:** Access Cross-Vendor Analytics with Flexible Scope

102 As an In-Stock Manager, I need to access CPFR data across my assigned vendors (and outside my default scope as
103 needed) for strategic analysis, so that I can identify patterns, optimize category performance, provide comprehensive
104 support, and make informed decisions without access constraints

105 **Story I-2:** Reduce Time on Routine Data Work

106 As an In-Stock Manager, I need to spend less time on routine data extraction, validation, report prep, and responding to
107 vendor data requests, so that I can focus on proactive vendor collaboration, root-cause analysis, and strategic planning

108 **Story I-3:** Customize Vendor Data Views

109 As an In-Stock Manager, I need to customize the metrics and data views that my vendors see (especially for high-touch
110 relationships), so that I can tailor data presentation to each vendor's specific relationship needs and analytical
111 capabilities

112 3.3 CPFR Team User Stories (CPFR-Only)

113 **Story P-1:** Establish Single Source of Truth with Governance

114 As a member of the CPFR team, I need to establish and maintain a single, governed source of CPFR data with daily
115 immutable snapshots that all stakeholders reference, so that we can eliminate data inconsistencies, reduce support
116 burden from conflicting interpretations, eliminate time-of-day drift, and ensure all stakeholders reference the same
117 data version for collaborative planning

118 **Story P-2:** Provide Definitive Audit Trails
119 As a member of the CPFR team, I need to provide definitive data lineage and access logs for CPFR data, so that we can
120 resolve discrepancies, support audits, and maintain accountability

121 **Story P-3:** Support Advanced Analytics and Cross-Team Sharing
122 As a member of the CPFR team, I need to structure CPFR data to support machine learning model training, advanced
123 analytics, and shared data definitions across teams, so that we can enable future AI/ML-driven insights, automation,
124 and effective collaboration that eliminates planning risks from conflicting extracts

125 **3.4 Business Intelligence Engineer (BIE) User Stories (CPFR-Only)**

126 **Story B-1:** Scale Data Access Without Proportional Overhead
127 As a Business Intelligence Engineer, I need to enable data access for thousands of vendors without requiring
128 proportional infrastructure or support overhead, so that the CPFR program can scale efficiently as business grows

129 **Story B-2:** Provide Unified Data Access Layer
130 As a Business Intelligence Engineer, I need to provide a unified data access layer that internal teams can leverage, so
131 that we can eliminate duplicate tool development, shadow tools, and ensure consistent data governance

132 **3.5 Cross-Team User Stories (CPFR-Only)**

133 **Story X-1:** Extend Platform to Other Data Types
134 As a member of Vendor Compliance or other teams, I need to leverage the CPFR platform architecture for other vendor-
135 related data, so that we can create a unified vendor data environment without duplicating infrastructure

136 4. Vendor Compliance–Only User Stories

137 The following user stories are specific to Vendor Compliance (chargeback/compliance). They reflect chargeback/violation
138 content, dispute resolution, Compliance Manager persona, program scalability, and VC-specific reporting. There is no
139 CPFR equivalent.

140 VC Problem Context (abbreviated):
141 Too many touchpoints (e.g., up to 45 emails from Chargebacks and 20 from CPFR/VC per month); chargeback/compliance
142 files shared as static email attachments with no centralized repository; dispute resolution requires multiple emails, Oracle
143 CRM, and duplicate documentation (e.g., 12 clicks, 20 minutes); contact data managed across multiple tables and teams;
144 program supports 123 vendors with need to scale toward \$21M entitlement opportunity.

145 4.1 Historical Chargeback/Compliance Repository (Vendor)

146 **Story V-4:** As a vendor, I need to access my historical chargeback/compliance data and supporting documentation
147 directly within CPH, so that I can analyze issues, resolve disputes, and track trends over time without searching through
148 old emails.

149 Note: This story emphasizes VC content (chargeback/compliance repository). The capability to access reports in one
150 location is covered in Section 2.1; this story keeps VC scope explicit.

151 4.2 Dispute Resolution — Vendor

152 **Story V-5:** As a vendor, I need to view all my chargebacks and file disputes in a single interface within CPH (without
153 being redirected to Oracle CRM or re-uploading documentation), so that I can resolve issues in fewer steps and less
154 time (target: fewer than 5 clicks and 5 minutes).

- 155
- 4.3 Dispute Resolution — Compliance Manager
- 156
- Story VC-1:** As a Compliance Manager, I need all dispute supporting documents and case details stored in one
- 157
- platform, so that dispute resolution efficiency can improve (e.g., ~30%) and we can reduce Oracle CRM ticket volume
- 158
- (e.g., ~1,500 tickets per year related to disputed chargebacks).
- 159
- 4.4 Program Scalability (Compliance Manager)
- 160
- Story VC-2:** As a Compliance Manager, I need a scalable framework in CPH to manage chargeback/compliance
- 161
- reporting and defects across the company, so that we can expand the program (e.g., toward the \$21M entitlement
- 162
- opportunity) without increasing manual workload proportionally.
- 163
- 4.5 Data Sharing Visibility — Category Manager
- 164
- Story C-1:** As a Category Manager, I need Tableau views or data outputs that show data-sharing levels across the
- 165
- vendor base (without requiring CPH login where specified), so that I can understand vendor engagement and sharing at
- 166
- a glance.
- 167
- 4.6 Table Outputs for Program Performance — Compliance Manager
- 168
- Story VC-3:** As a Compliance Manager, I need table outputs from CPH (e.g., chargeback disputes, vendor feedback,
- 169
- ticket dispositions, usage, program performance), so that I can build tools to measure and evaluate program
- 170
- performance.
-

171

5. Phasing

172

User story delivery aligns to the merged BRD phased release plan:

Version	Focus	Scope
Phase 1	Chargebacks	Enable Chargeback vendors to access files in CPH (e.g., 123 vendors); File Access Control; dispute process integration.
Phase 2	Violations	Add violation data access for all vendors; violation metrics per merged BRD.
Phase 3	CPFR	Add CPFR reporting in CPH (CPFR module); dependent on deployed CPFR data platform. VC Phase 3 and CPFR Phase 2 are the same deliverable.

173

For full phasing (parallel CPFR Phase 1 platform build and VC Phases 1 & 2; transition of CPH capacity to CPFR module;

174

vendor isolation alignment), see CPH Portal & Platform BRD (CPFR & VC Merged).

175

6. Document Maintenance

176

This document should be updated when: - Problem statements or user needs are refined through stakeholder feedback -

177

New combined, CPFR-only, or VC-only stories are identified - Phasing or version scope changes

178

Maintenance principles: - Preserve problem statements and user needs even as solutions evolve - Keep clear separation

179

between combined (dual applicability), CPFR-only, and VC-only stories - Update the “Last Updated” date with each

180

significant change - Maintain traceability to the CPH Portal & Platform BRD (CPFR & VC Merged)
