

Chewy Partner Hub (CPH) and Vendor Compliance

Overview: The purpose of this review is to assess the user stories and framework for feedback and timeline alignment. This session will not focus on detailed widgets or functionality. Instead, it's a high-level review to confirm framework structure, review and align resources, and prepare for the next phase of granular design and build work.

Background: Chewy's current vendor communication process is fragmented and overly dependent on email, with Chargebacks, Vendor Compliance, and CPFR teams sending up to 65 emails per month to a single vendor. This manual approach creates inefficiency, limits visibility, and frustrates both internal teams and vendors, who struggle to locate information and resolve disputes efficiently. Managing communication consumes significant time and leads to rework, while competitors have adopted centralized platforms that offer data access and streamlined collaboration. With \$10.8 million in annual chargeback-related data, transitioning these workflows into the Chewy Partner Hub will modernize communication, improve visibility, and create a scalable, vendor-centric experience.

User Stories:

1. **Too Many Touchpoints:** Vendors are currently overwhelmed by excessive communication from multiple Chewy teams, receiving up to 45 emails from Chargebacks and 20 from CPFR and Vendor Compliance each month. This fragmented approach creates confusion, inefficiency, and inconsistent access to critical reports.
 - a. **User Story:** As a Vendor, I receive too many emails from different Chewy teams to effectively manage my business. I need a single, consistent location where I can access the reports and insights that matter most without sorting through dozens of messages each month.
 - b. **User Story:** As a Category Manager, I need my vendors to have direct access to the most critical reports for production planning and supply management. I do not want them searching through 65 separate emails to find what is important. They should always know exactly where the latest reports are stored and how to access them.
2. **Centralize Data Access:** Chargeback and compliance files are currently shared as static email attachments with no centralized repository. Vendors frequently request historical files, creating repetitive manual work and delayed responses. Providing centralized access through CPH will give vendors a self-service option to retrieve documentation and validate data without waiting on internal teams.
 - a. **User Story:** As a Vendor, I need to access my historical chargeback data and supporting documentation directly within CPH so I can analyze issues, resolve disputes, and track trends over time. I should not have search through hundreds of old emails to review my month-end results.
 - b. **User Story:** As a Category Manager, I need visibility into all vendor reports within CPH so I can quickly reference data, validate performance, and make informed decisions without relying on manual file sharing or outdated attachments.
3. **Time to Resolution:** The current chargeback resolution process requires vendors to navigate multiple emails, attachments, and platforms to address a single issue. On average, it takes 12 clicks and 20 minutes to reach dispute resolution. Competitor platforms such as "Traverse" (Appendix 1.4) have streamlined this process to fewer than 5 clicks and 5 minutes by providing a single, intuitive interface that displays all chargebacks, charge types, and disputes in one place.
 - a. **User Story:** As a vendor, resolving chargebacks through Chewy takes significantly more time than with other retailers. I must navigate multiple emails, log into a separate platform (Oracle CRM), and reattach the same documentation that was already shared via email just to support a dispute. This repetitive and manual process wastes time, creates confusion, and delays resolution.
4. **Report Distribution:** Not every vendor should receive the same reports. Each vendor operates under a unique strategy defined by the Category Manager, who must be able to control which reports are distributed and to whom. The business needs an interface within CPH that allows users to assign or remove report access by vendor, ensuring that only relevant partners receive applicable data.
 - a. **User Story:** As a Category Manager, I need the ability to control which vendors have access to specific reports. I need the flexibility to add or remove vendors from report distributions so that each partner only receives information aligned to their business strategy.
5. **Lack of Scalability:** The Chargeback Program currently supports 123 vendors, but the existing email-based model cannot sustain future growth. Managing CRM escalations, vendor file requests, historical data pulls, and ongoing email updates consumes significant time and limits the team's ability to operate efficiently. To capture the estimated 21M entitlement opportunity through program expansion, we need a scalable framework that reduces manual touchpoints and supports company-wide defect management.
 - a. **User Story:** As a Compliance Manager, I need a scalable framework to manage chargeback defects across the company so that we can resolve issues efficiently and expand the program without increasing manual workload.

6. **Contact Information:** Vendor contact data is currently managed across three separate tables by four teams — Chargebacks, Vendor Compliance, CPFR, and Cognizant. This fragmented structure results in misrouted requests, inconsistent updates, and unnecessary rework. Approximately 90 tickets are created each month solely to correct or update contact lists. While Chewy already uses SSUA for vendor self-service, this creates a disjointed vendor experience. Many vendors are confused when they update contact information in SSUA but must still submit a separate ticket or follow a different workflow to update email distributions. Consolidating contact management within CPH will allow vendors to self-manage contact details and communication preferences in one place.
 - a. **User Story:** As a vendor, I need to manage my contact and distribution preferences. I currently manage this through a workbook and send updates to Chewy once a month with the requested changes. I also need the ability to grant access to stakeholders outside of CPH based on admin credentials so updates can be managed securely.
 - b. **User Story:** As a Manager, I often deal with frustrated vendors who want to be added to the correct reports. We must check multiple tables and confirm which reports they are referring to. There is also a risk of overwriting others updates since too many people and teams make changes across systems.
 7. **Merch and In-Stock Awareness:** Vendor reports are essential for production, replenishment, and supply but internal visibility is inconsistent. Category Managers and In-Stock teams are not always included in vendor communications. This gap can cause misalignment when vendors reference report data or request follow-up actions. Improving visibility within CPH will ensure internal teams have access to the same information vendors receive.
 - a. **User Story:** As a Category and In-Stock Manager, I need access to the reports vendors receive and the ability to reference them when needed. I need visibility to ensure I have the context to engage effectively if a vendor references the data or requests follow-up action.
 8. **Dispute Resolution:** The Chargeback Program receives approximately 1,500 Oracle CRM tickets per year related to disputed chargebacks. Each dispute requires supporting files to investigate, calculate, and determine the appropriate refund. Currently, these documents and workflows are spread across multiple systems, creating inefficiencies and delays. Integrating dispute functionality within CPH would allow both vendors and Chewy teams to access all necessary documentation and manage disputes directly in one platform.
 - a. **User Story:** As a vendor, I need to view all chargebacks and file disputes directly within a single platform without being redirected to another portal or required to upload duplicate documentation.
 - b. **User Story:** As a Compliance Manager, I could increase dispute resolution efficiency by approximately 30% if all supporting documents and case details were stored in one platform.
 9. **Data Structures and Cross Team visibility:** Chewy teams require table outputs from the CPH platform to support reporting and analysis. These outputs will enable internal users to monitor vendor profiles, dispute activity, and performance without relying solely on the CPH interface.
 - a. **User Story:** As a Category Manager, I need to understand the level of data sharing with a vendor without logging directly into CPH. I need a Tableau view or data output that provides this information across the entire vendor base.
 - b. **User Story:** As a Compliance Manager, I need table outputs from CPH that include chargeback disputes, vendor feedback, ticket dispositions, usage, and other program data. These outputs will allow me to build tools that measure and evaluate overall program performance.
 10. **Ability to email reports:** While the goal is to reduce excessive email communication, vendor outreach sessions have shown that many vendors still prefer receiving essential reports via email. Several vendors have automated systems that scrape these reports and load them into their internal tools, reducing manual effort. This approach allows vendors to monitor overall business health efficiently while using CPH for detailed chargeback or supply chain data. Currently, report emails are sent using Python and SPARK, but the process should be consolidated into a single system that reads directly from contact management and report distribution settings within CPH.
 - a. **User Story:** As a vendor, I need the ability to control which reports are emailed to specific team members. My staff manages catalog accuracy, production schedules, outbound quality, replenishment, shipping, and other key functions, and each team requires access to different reports to optimize performance. I want to manage what reports are sent and to whom, ensuring each group receives the relevant information.
 - b. **User Story:** As a Manager, I need vendors to remain engaged with performance reports and receive proactive notifications about overall business health. I also need proof of delivery to confirm vendors have received their reports so I can hold them accountable for performance metrics and ensure timely action on identified issues.

Version Releases and Approvals

Onboarding to CPH unlocks several workstreams and we want to ensure all approvals are granted.

Version 1: Chargebacks. The 1st release focuses on enabling Chargeback vendors to access files (currently 123 vendors).

Version 2: Violations. The 2nd release adds violation data access for all vendors.

Version 3: CPFR. The 3rd release adds CPFR reporting.

Next Steps:

- 1. Approvals from CM Leadership (11/28)

Appendix 1.0

Appendix 1.1

We must implement **File Access Control** within CPH to give Category Managers the ability to define and manage vendor data-sharing permissions. This is the first and most critical step in the framework, ensuring that each vendor only receives the reports and information appropriate for their program participation.

	A	B	C	D	E	F	G	H

Appendix 1.3: Large Milestones

Priority	Description
1	Build GUI for internal report addition
2	Build Chargeback framework and share files
3	Build Email changes within CPH for vendor to self-service
4	Build Dispute process
5	Build Vendor Compliance and CPFR files
